Punching Shear and Flexural Strength of Slab Must Be Checked.

Depending on the Above Factors, Capacities Could Be Higher or Lower Than Those Listed.

The Quality of the Installation of the Plate, Your Attachment, and the Strength of the Foundation Bracket Connection and Individual Elements, Including the Capacity of the Foundation, will affect the capacity of the underpinning system.

All Welding is to be done by Welders Certified Under Section 2.28.2.28 Polyethylene copolymer thermoplastic coating per ICC-ES AC700.
